

# TL;DR

---

Recurrence is an iPhone, iPad, and Mac app that gives people somewhere to put their recurring tasks while also giving them the power to take notes related to past ones. Need to know something about a task that occurred three months ago? Recurrence has the info ready and waiting.

---

## What is Recurrence?

---

Recurrence is more than just another todo app. Going beyond just reminding people that a task needs to be completed, Recurrence also tracks what they did to add extra context when needed.

An example: someone has a pet that needs medication. Maybe it needs checkups at the vet, too. Recurrence can remind them when they need to do give it the medication it needs as well as arrange a new visit to the vet. But it goes beyond that – Recurrence makes it easy to track things like what the pet weighed during its last visit, which medication was prescribed, and anything else they think might be handy! If a task happened in the past, Recurrence will have any notes the user made at the time.

While normal task managers do allow people to take notes, those notes don't differentiate from one occurrence to another. That makes it impossible to add a note and know which completion it relates to. In contrast, Recurrence allows people to make individual notes every time a task is completed, creating a history that can be read later.

### Recurrence features include:

- Task tracking and customizable repeats – create tasks that repeat when needed with customizable options that include a lock that prevents a future task from being checked off before it's ready.
  - Task organization – add tags and more and then use advanced filtering options so people will always be able to find the tasks they need. A handy search option is also available.
  - Task customization – tasks can be configured to show all kinds of information including the number of occurrences, the last completion, notes, and more.
  - Siri Shortcut support – tasks can be marked as completed using Siri.
  - Full task history and notes – information includes when tasks were completed as well as notes from each completion, especially useful for tasks that you want to keep a track of over time.
  - Full widget support – Recurring tasks appear right on the Lock Screen or Home Screen.
  - Cross-device support – from iPhone to iPad to Mac and back again, seamless syncing powered by iCloud.
- 

## Who is Recurrence for?

---

All kinds of people from every walk of life can make use of Recurrence. If there is a task that recurs, Recurrence is the best way to be reminded about it.

### Potential use cases include:

- People who want to be reminded to check the oil on their car but also need to be able to track the oil levels over time. Recurrence handles both thanks to its handy notes feature.
  - The bill payer of the family can be reminded when they need to be handled. They can even track how much each bill was every time they pay one, creating a paper trail as they go.
  - Workers can create a recurring reminder to complete annual assessments and track their scores.
  - A family that wants to be reminded to do household chores but also needs to track who did what and when.
  - Anyone who needs to be reminded to do a thing in the future but wants to see notes made the last time they did it, too.
- 

## Pricing

---

Recurrence is a free download with ad support and a five task limit.

Users can remove ads and unlock unlimited tasks with Recurrence Premium – available as a monthly or annual subscription. A lifetime unlock is also available as a single purchase as well.
